

INDIVIDUAL REPORT

MTL CHAUSSURES

Working on the Flutter project, along with the project team I came to learn about various aspects of coding and how to code itself. No doubt it was a test of our knowledge on each step but as we progressed working on MTL CHAUSSURES became rewarding self-accomplishment.

During the project timeline, I was working on three pages and their corresponding functionalities and they are:

1. Product Detail Page
2. Order Page
3. Cart Page

To be honest, being enthusiastic about new technology I was also facing quite a difficulty in catching up with the flutter concepts. As much as, I was lagging among my teammates. I do not want to point towards the excuse, however, it would be a more fruitful experience if I received a better course outline and time.

Above all, it was a great learning experience I came to learn my weak points and how to overcome them. Thank you for all the support during the project development process Adin Ashby.

Thank You
